Cavotec builds 9.2m-drum crane cable reel

We have recently built what is believed to be one of the world's largest mono-spiral motorised cable reels. With a drum diameter of 9.2m, and weighing in at 10,000kg, it is the largest drum manufactured by Cavotec to date.

This extraordinary unit has even prompted the release of a new gearbox specifically for it - the T9.

The unit is part of an order placed by crane manufacturer [ZPMC](#) for four complete cable reel sets now installed on cranes at two major ports - one in Asia, the other in Europe.

Cavotec is a leading cleantech company that develops connection and electrification solutions that enable the decarbonisation of ports and industrial applications.
