Cavotec starts shooting new company film

After weeks of careful planning, we have now started shooting our brand new company film that will provide a flavour of the technological diversity and geographical variety of our customer base.

The new film will present the Cavotec Group to customers, partners and the general public, and will replace the existing version that has served us so well in recent years.

Our first stop on the filming trip was [Frankfurt Airport](#), where we gathered

footage of our [ground support equipment](#) that serves a wide range of aircraft including the Airbus A380. After filming MoorMaster™ automated mooring units in [Denmark operating on a fast ferry route](#), the team are headed Down Under to shoot the newest [MoorMaster™ application at Port Hedland](#).

The final leg of the trip will take the team to the US. Here they will film several applications at ports and airports across the country, including [cable reels on shore-to-ship cranes at the Port of Virginia](#), Alternative Maritime Power (AMP) systems at the [Port of Los Angeles](#) and more ground support equipment at [Los Angeles International Airport](#).

We'll be posting images, updates and anecdotes from the road on our [Facebook page](#), with alerts on [Twitter](#) that you can find with [#Cavotecfilm](#).

Cavotec is a leading cleantech company that designs and delivers connection and electrification solutions to enable the decarbonization of ports and industrial applications..
