Cavotec launches ultra-fast Megawatt Charging System for battery-powered vehicles

Heralding a major breakthrough in industrial e-vehicle and e-vessel charging, global engineering group Cavotec has launched its ultra-fast Megawatt Charging System (MCS). Providing up to 3MW of power from a single connector, the MCS is a turnkey DC charging solution with grid-to-inlet functionality that supports the decarbonisation of industrial vehicles and ships.

“MCS enables the safe and quick connection of heavy-duty vehicles and ships to electrical power in a reliable, ergonomic unit. As the most powerful system on the market, MCS significantly reduces typical charging times, thereby minimising downtime,” says Jörn Bullert, Vice President Product Management, Charging Solutions.

The MCS has been designed for use with all kinds of heavy-duty vehicles used in a variety of sectors, including agriculture, construction, mining; and with e-vessels such as ferries.

MCS highlights Cavotec’s leading position in the development of large-scale industrial battery charging solutions and technologies that will enable industries to decarbonise and reduce their environmental impact. Cavotec has led the electrification of industrial applications for many years. Learn more about MCS [here](#).

The MCS system will be officially launched on 24 October at Bauma, the world’s leading construction machinery trade fair.

Cavotec is a leading cleantech company that designs and delivers connection and electrification solutions to enable the decarbonisation of ports and industrial applications. Backed by more than 40 years of experience, our systems ensure safe, efficient and sustainable operations for a wide variety of customers and applications worldwide. Learn more at cavotec.com.
